

CAMPAIGN UPDATE

OCTOBER 2021

The Jersey Youth Parliament is a group that works together to find out what is important to other young people. They then share their findings with the people who make decisions that affect young people.

We would like make changes to improve our environment which will help humans too. We would like to;

- Reduce carbon emissions that are released when fossil fuels are burnt
- Improve recycling facilities
- Support and protect living things in Jersey
- Encourage people not to waste resources and think about the impact of their lifestyles

The Climate Change Campaign Group

We have been working for 6 months and during this time we have met with experts and been active.

We have released a statement about how we think we can work towards a healthier environment in Jersey and how we can do it fairly.

We are promoting the use of electric cars, buses, bicycles and walking to get around.

We raised money for charity and planted fruit shrubs and worked to protect local trees for the future. We have become a plastic free Youth Parliament.

We have asked questions to find out why more isn't being done to recycle in schools across the Island.

We've shared our work with politicians, asked for their help to lead by example and better protect our environment and to make changes by 2030.
